## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, drawn to a radio base station, classified in class 370, subclass 328.
  - II. Claims 8-10, 13, and 14, drawn to a packet switched network, classified in class 370, subclass 352.
  - III. Claims 11, 12, and 15, drawn to a method for paging a mobile station, classified in class 370, subclass 347.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the packet switched network of group II includes system elements, like the SGSN, that are not required for the patentability of the radio base station of group I. The subcombination has separate utility such as a base station in any type of cellular communication network, not just a GPRS specific network.
3. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the packet switched network of group II includes system elements, like the SGSN, that are not required for the patentability of the paging method of group III. The subcombination has separate utility such as paging a mobile station in any type of cellular network, not just a GPRS network.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Alex Nicolaescu on August 28, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
